- This method requires a 12vDC linear actuator that does not draw more than 5amps.
- To program press REC on the PicoBoo. Press output button 1 to make the actuator go one direction and button 2 to make it go the other direction. Pressing both buttons will do nothing. Press REC when done recording.
- Wires shown in various colors only for clarity. Any color may be used.
- This data applies to all of our controllers that contain relays.

CONTROL A LINEAR ACTUATOR FROM A PICOBOO

12VDC 5AMP or 12VDC 10AMP Power Supply

PicoBoo Jr, PicoBoo, PicoBoo PLUS

12VDC Linear Actuator

* Turning on output 1 will make the linear actuator go in one direction and output 2 the other.
