

- Light will activate when motion is detected. When motion is no longer detected light will remain on from 2 to 30 seconds depending on motion sensor.
- When first powered-up the light will blink on/off as the motion sensor warms up (about 30 seconds).
- The motion sensor must be of "normally open" type (FrightProps motion sensor are all "normally open", other's may not be)
- A 12vDC 1AMP regulated power supply is sufficient for a few lights. If you want to run a bunch then you can use a 12vDC 5AMP regulated power supply. It is important that the power supply is regulated or else the LED will burn out.
